IMPORTANT

CARBURETTERS – EXHAUST EMISSION CONTROLLED VEHICLES

The specifications referred to in this publication as available for the American market only are made to satisfy the U.S.A. Statutory regulations regarding exhaust emission. The carburetters must not be dismantled or the settings altered without reference to the relevant manufacturer's servicing instructions.

$1\frac{7}{8}$ in.	HV8
2 in.	H8, HD8, HS8

NOTES

CARBURETTERS

(1) Some pre-war carburetters using bronze sand-cast bodies cannot always be supplied as complete replacement sets. The main sub-assemblies, such as piston units, jet assemblies, or float-chamber units, may be available but the sand-cast body is not.

However, the sand-cast bodies were practically indestructible, and the fitting of an oversize throttle spindle is generally all that is necessary as a repair after reaming out the throttle spindle bores.

(2) The needle tunings given in this list are correct at the time of printing, but it should be borne in mind that any one of a number of variables (such as alteration to the type of air cleaner or air pipe, or to the compression ratio, or to the shape of the induction pipe and combustion chamber or exhaust system, etc.) can make necessary a change in carburetter tuning. Whilst the majority of tunings remain unaltered over a long period, some are subject to revision because of a change in one of the variables; therefore if any doubt arises in the odd case as to the suitability of a needle type on a particular car, check back with the factory.

PUMPS

Where no alternative pump specification is listed see leaflet AKD 4812 B (AUA 212 B.)
